

READY, SET, SNOW!

We can help prevent frost from damaging your sprinkler system and causing floods.

Every Fall, all dry pipe systems must be winterized.

Due to Canada's diverse weather conditions, condensation continually forms in dry pipe systems. Eventually, this condensation settles in the "low point" drains.

It is the owner's responsibility to check and drain collected condensation prior to any cold weather.

As part of our overall winterizing service, Troy can provide this check and we can also train your staff on how to perform this procedure correctly.

Don't let winter catch you unprepared...call us today!
