

# Audio! We do AUDIO!

## We've got you covered!

Troy provides a complete Audio and Communications solution. From background music to a full campus Mass Notification system we have the tools to solve any audio problem. Whether you have an existing audio system that needs an upgrade to produce the sound you expect or you have a need for a new system, we are always on call to find you the best possible solution. Just take a look at the mix of high quality sound products we offer at a great price.

## Racks and Accessories: Now it's easy to find a home for your amplifiers.

Seven primary families of vertical racks, including floor standing and wall mount, each with exceptional strength and versatility, fit any requirement and budget. We are your true full line supplier! The robust and cost effective racks can be combined with other Atlas solutions to create the perfect install. The FMA (Folded Metal Assembly) design incorporates an innovative "Radius" look characterized by sleek corners and seamless joints. This look blends effortlessly in today's ergonomically designed office environment.

## Sound Masking: Keeping the workplace productive.

With a good majority of Canada's workplaces having adopted an open office plan, favouring a labyrinth of cubicles over traditional closed offices, conversational privacy has become an increasingly sensitive issue. A properly designed sound masking system can significantly increase speech privacy and improve the overall work environment.

The new M1000 masking speaker assembly is designed to accurately reproduce the needed spectrum of masking signal. The innovative 734 cubic inch square enclosure ensures ample low frequency response. A specially designed 8" dual cone loudspeaker is included in the package. The MG2500 Sound Masking Processor is a digital pink-noise generator that includes a balanced line-level audio input and 2-channels of digital signal processing, all in a single rack-space unit.

# What?

## Speakers and Horns: Covering all the "Bass" es.

All types of audio situations require all types of speakers and you can trust we have the right one for the job. From the Strategy 2 to the SD series of speakers we now have access to premium sound as well as quality built traditional ceiling mount speakers

### Strategy 2 Series

These premium 70.7/100V tuned & ported coaxial ceiling speaker packages will satisfy the needs of owners, architects, contractors, and consultants by delivering true, high fidelity sound reproduction in an attractive and easy-to-install system. The smooth frequency response, even, wide coverage, sonically pleasing voicing and ease of installation of the Strategy Series have stood the test of time.

### SD Series

The next generation of high performance cone loudspeakers, the SD series is an aggressively priced quality speaker/baffle/transformer package suitable for most any paging or background application including retail stores, restaurants, schools and other institutional facilities.

### AP Series Horns

These horns are environment resistant for outdoor & indoor use with a high-efficiency driver with proven performance and reliability. Omni-Purpose® Bracket for precise positioning, superior intelligibility for voice and tone signaling. World recognized for quality and dependability while offering continuous power handling, superior intelligibility and unparalleled efficiency.

### IP Speakers and Software: For the complex solution we have the perfect match.

There is no longer the need to connect from building to building when you can communicate through the existing intranet. IP speakers and zone controllers provide a better solution than "phone only" paging by increasing intelligibility. Network input is made with a standard RJ45 connection, so you can simply tap in to the existing building's network.

We offer a comprehensive selection of loudspeaker products to compliment ControlKom™ and Informacast® (Cisco®) software deployments in K-12, campus wide notification, civil / municipal, industrial, and health care applications. In complex zone paging scenarios IP speakers are often more economical than traditional paging.

### Varizone: Taking Audio and Communication to the next level.

Ideal as a standalone fully supervised mass notification solution. A revolutionary new audio technology with amazing configuration and control capabilities. The power of Varizone far exceeds that of traditional systems designed around mixer/routers, rack mount amplifiers and 70/100V systems.

A fully digital bus structure distributes uncompressed digital audio data from one or many VADIS frames to an unlimited number of remote amplifier modules (PAMs) using either CAT 5 or traditional four conductor stranded twisted pair cable. Each PAM is a 2-channel device capable of powering 4 loudspeakers.

### Strategy Series Amplifiers: Pump up the volume.

When designing a proper audio system the head end amplifiers must deliver and when it comes to the finest commercial and professional sound products in the industry, our line of amplifiers delivers. The Sound Strategy Series Amplifiers were designed from the ground up to address the needs of the commercial sound industry. These amplifiers include extensive feature sets, compact designs, a variety of accessories, and are engineered for long term reliability.

### Stadium Horns - We will rock you.

Atlas Sound AH Series stadium horns offer the most often requested coverage patterns while providing excellent intelligibility for even the most challenging environments. All models offer unique features that make the AH family a perfect choice for applications such as large auditoriums, sports arenas, and baseball fields. With a complete family of 15", 12", and 8" 2-way systems, designers and specifiers can select models for whatever SPL is required with the peace of mind that all units will provide outstanding pattern control.
