Specializing in Freezer Warehouse Protection

Imagine having the ability to detect a fire with advance notice, having hours to locate and respond to the threat.

Imagine no more. Very early warning systems are a reality with today's fire detection technologies.

We specialize in the protection of both refrigerated and dry storage warehouses along with its supporting infrastructure including switchgear, pump rooms and other mission critical areas. We offer both proven methods of freezer fire detection; air sampling and linear heat detection. Read further to see how we may help you avoid the high costs associated with destroyed merchandise and lost productivity.

The Leaders in Freezer Fire Detection.

Troy specializes in the protection of both refrigerated and dry storage warehouses. Troy is the master distributor for Canada for the SAFE Fire Detection Inc. line of Air Aspiration and Thermocable linear heat detection products.

AIR ASPIRATION SYSTEMS - Very Early Warning Fire Detection

Imagine having hours, even days, to respond to a true incipient fire threat before smoke or fire are detected by laser or spot detection systems. ProSeries' revolutionary CCD technology, in combination with our new

Standard, Enhanced and High Pressure Aspirators, can provide your business and facility with protection that far exceeds any previous aspirating system.

LINEAR HEAT WIRE - Standard Detection

Linear Heat Detection (LHD) is a heat sensitive wire which is located in the racks at each sprinkler level, and/or mounted on the ceiling. Linear heat provides standard detection by allowing any approved addressable or conventional panel to signal an alarm when heat activates the wire. ThermoCable is interfaced to your fire alarm panel typically located in the sprinkler riser room and is run in the flue space of the racks at each sprinkler level and/or on the ceiling. It activates as flames approach the wire.

Peace of Mind

We offer complete service packages tailored to your specific requirements. Our factory-trained technicians work with sophisticated inspection instruments and their comprehensive training runs the gamut of life safety systems and equipment.

Service Above All

- Emergency service 24 hours a day, 365 days a year
- Project assessment
- Installation of product
- Verification of operation and equipment
- Preventive maintenance
- On-site training of maintenance staff

Commitment to Maintenance

- Local support, quick response
- Over 300 sprinkler fitters in 30 locations across Canada
- 24-hour service, two-hour on-site emergency response

We Provide Service for:

- Sprinkler systems
- Air Aspiration
- Fire alarm systems
- Emergency lighting and exit signs
- Portable fire extinguishers
- Fire hoses
- Card access systems
- Video surveillance systems
