# Need Reliability?

imagination at work

# The Answer is in

It's comforting to know that your nurse call system can deliver the 24/7 reliability needed by caregiving staff.

## Introducing Telligence™ from GE.

A healthcare facility's internal systems are vital to its operations. Unfortunately, if these critical systems fail and go offline, everyone – including patients – suffers the consequences.

With a simplified cable plan, CAT5 RJ connections, and modular rack-mount central equipment, **Telligence** delivers reliable operation. So your facility can deliver effective patient care.

## Spare parts inventory challenges?

- **Telligence** simplifies nurse call central equipment design, using IP-network architecture including compact rack-mount switches and hubs with built-in power supplies. Just two central equipment spare parts are needed to support an entire system.
- Using **Telligence's** exclusive Choice™ Programmable Technology, its two and three button stations can be whatever you like. No need to stock replacements for all of the parts in your system – **Telligence** makes it easy!

## Connector problems?

- **Telligence's** 18-point DuraPin™ pillow speaker receptacles deliver dependable and consistent operation.
- BedConnect™, a **Telligence** exclusive, lets customers add 37-pin bed receptacles to their patient stations. All devices can now be connected in one convenient location.

# Telligence™!

## LED Dome Lights?

- **Telligence** exclusive Infinity™ Dome lights offers the reliability of LED's.
- **Telligence** Infinity Dome lights also incorporate convenient RJ45 connections in an attractive 1-piece enclosure. No more lenses, dividers and bulbs to fall apart.

## Built-in Diagnostics?

- **Telligence** supervises all system components to monitor proper operation. If a failure is detected, the station is reported to the local staff console and can also be sent to a wireless messaging device.
- Component replacement on **Telligence** is a snap. Simple connectors, combined with convenient backbox mounting plates and hot-swap design, help technicians return rooms to service in only a few minutes.

## Flexible system software applications?

In addition to flexible Windows-based configuration software, **Telligence** delivers a suite of applications to help caregivers to deliver more effective care:

- PC Assignments – client application assigns staff to beds and wireless devices to automatically deliver patient calls to the appropriate caregiver. Even code and biomed teams can be configured to receive specific calls.
- PC Messaging – browser application turns every PC in the hospital into a nurse call messaging station. Now other departments can send messages, not just nursing units.
- MapView – displays patient calls and reminders, staff location and room status in a floor plan view that is easy to build and use.

Not only does **Telligence** incorporate groundbreaking nurse call technologies like Voice-over-IP, it also provides the tools necessary to keep the system online 24/7.

**Reliability is in Intelligence.**
