

Need Simplicity?

The Answer is in

It's reassuring to know your nurse call system has the simplicity to blend in with your existing network, not impose on it.

Introducing Telligence™ from GE.

Managing a data network can be like conducting an orchestra. Complex. Fragile. Temperamental. Perfect harmony can be difficult to achieve. After all, it only takes one instrument to be out of tune and everything goes flat.

Don't let a sour note spoil your performance. Telligence joins in with your network like a virtuoso. In tune with whatever else is going on. Responding to every wave of your conductor's baton. Yet, you'll barely know it's there.

Looking for CAT5 network cable plan?

Telligence uses standard CAT5e/6 cable, RJ connectors, and common networking topology to conform to your other networks, simplifying system installation, management, and support.

Crowded network communication rooms?

Telligence combines nurse call signaling, audio switching, and integrated power supplies into compact rack-mounted PowerSwitch™ and Station Gateway modules, helping you reclaim valuable space in these crowded equipment rooms.

Need expandability and growth potential?

Telligence will grow and evolve as your needs change, using the latest in Voice-over-IP, Powered Ethernet and SQL database system components.

Telligence™!

Expecting software that's powerful, yet easy to support?

Telligence's software suite lets staff log on at any client workstation to access their personalized set of password-protected applications.

Innovative clients

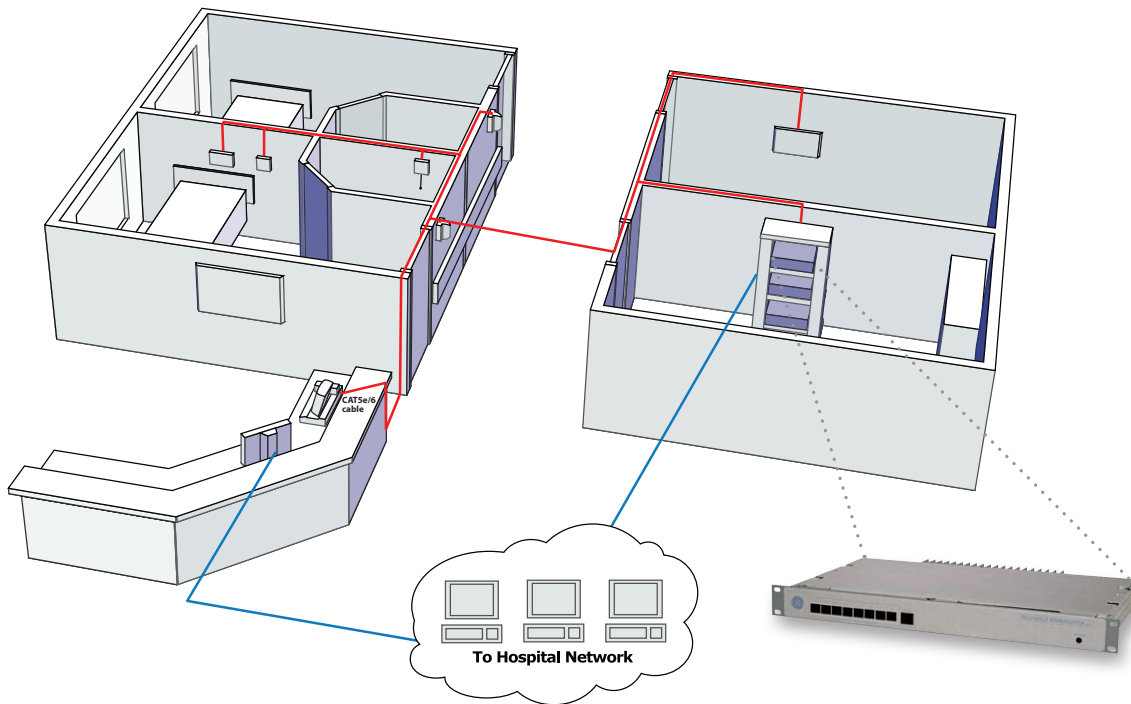

- PC Assignments - assigns staff to beds and wireless devices to automatically deliver patient calls
- MapView™ - displays system activity in a convenient floor plan graphic

Intuitive browser screens:

- PC Reporting - measures and reports response times to patient calls and other system activity
- PC Messaging - provides text messaging to mobile devices like pagers and wireless telephones

System Connectivity:

- Mobility Suite - delivers wireless system connectivity plus PC Assignments and PC Messaging ... a convenient all-in-one-solution
- ADT Bridge - allows HL7 import of key patient information to the SQL database for display on suite applications

Telligence combines the latest in VoIP and Powered Ethernet infrastructure with a robust SQL database and flexible software clients in a solution built to work with your existing network infrastructure.

Simplicity is in Telligence.
